

Our submersible agitators are so-called "Ex d" machines (test pressure: 28 bar). In the event that the components listed here are replaced by a company which is not specifically ATEX-certified, the ATEX approval for our agitator will expire. It is then mandatory that you **make the ATEX marking** for the agitator as well as for the motor **on the type plate unrecognizable**. Finally, we require a picture of the "modified" nameplate for the protection of all concerned.

Thank you very much!

Pos. No.	Article No.	Designation	Amount
1	59044526	Mechanical seal 50 TSR complete	1
2	59045524	Seal washer 76 x 48 x 1.5	1
