

“Does TIBA have an Entry Station that provides tickets during the day, and automatically switches to “pre-pay” at night?”

Of Course We Do!

Knowing that many facilities serve numerous parker types at different times of day, TIBA's SmartPark software and flexible lane devices enable multiple configurations for entry and exit payment options. This allows operators to provide ultimate flexibility and maximize revenue!

TIBA Parking Systems can automatically switch from ticket at entry to pre-pay on entry at your facilities' timing. This can be very beneficial for evening restaurant/bar patrons, event use, special time-of-day price schedules, or other cases where payment in advance is most advantageous. Paying in advance also helps to avoid late-night broken gates and skipped payments — allowing more revenue generation and less service call hassles. Ticket issued after payment provides a special pre-pay grace period, can be linked to LPR for automatic identification at the exit, and allows for “overstay” charging should the parker stay longer than the prepaid grace period.

Software installation solutions for all use cases:

- On-premise deployment with onsite servers — for site controlled operations
- Virtual environment deployment — local or off-site, installed in client's VM location
- Serverless, cloud deployment — SaaS, cost efficient, secure, reliable, updates/upgrades at no additional cost
- Hybrid on-premise and cloud model — for ultimate scalability and control
