# Certified Applicator Start-up Package Vipeq Thermal Corkshield – Alberta, Canada

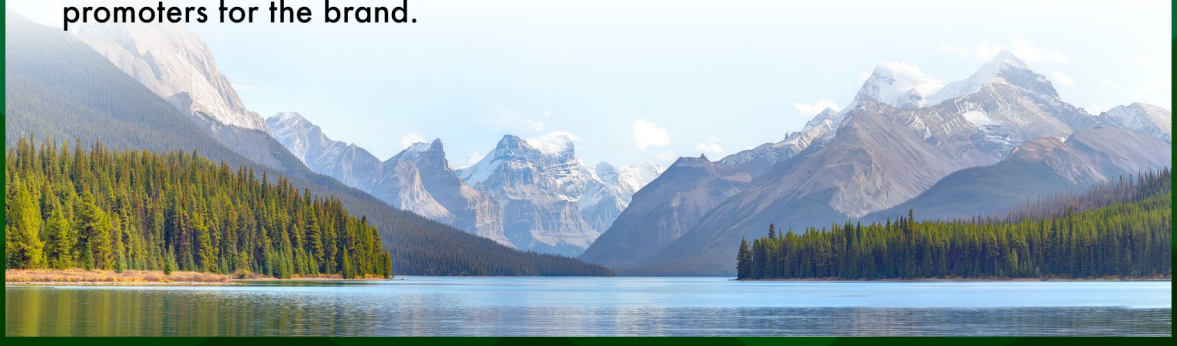

Vipeq's new and exciting Thermal Corkshield is now available in Alberta through APEQ Products Inc. APEQ is the exclusive distributor for Vipeq Products in Alberta. APEQ is selectively certifying professional applicators in the province of Alberta. The certification is included in your start-up package. Along with the certification, the start-up package also contains equipment, product and support needed to hit the ground running.

**Finding a job to spray is the responsibility of the applicator seeking certification.** All training and travels expenses incurred with onsite certification are included within the start-up package.

The start-up package provides 1 pallet of Vipeq's Thermal Corkshield. There are 36 pails on the pallet. This allows the applicator to complete a cork project of approximately 2,700 square feet. Certified applicators are estimating projects at $6.50 to $12.00 per square foot (every project is unique and the price is customized accordingly). For example, with the material provided, the first project could gross you **$20,250** (based on a $7.50/sq.ft. price) if the full pallet was utilized.

The applicator will receive social media support via posts on Facebook and Instagram. Leads or inquiries that come into APEQ will be passed along to certified applicators. APEQ is here to guide and provide support all the way through process. Together, we are all ambassadors and promoters for the brand.
