

PMK Global Flexible Prescient Fund of Funds

Minimum Disclosure Document - Class A1 31 May 2021

Investor Profile

The PMK Global Flexible Prescient Fund of Funds is suitable for investors seeking to to invest in offshore markets to achieve returns that are in excess of inflation by taking a relatively higher degree of risk with the aim of capital growth over the long term. Investors should be comfortable with market fluctuations and willing to accept potential capital losses. The Fund is suitable for investors who have an investment horizon of five years and longer and aim to build wealth by investing in a portfolio that diversifies the risk over the various offshore asset classes.

Investment Objective

The Fund will aim to achieve performance returns in line with the South African Consumer Price Index plus 5.5% over rolling 5-year period. It will seek to capture relative value opportunities by switching between asset classes and will further focus on geographical spread and manager selection opportunities.

Investment Policy

In order to achieve the objective, the Fund will, apart from assets in liquid form, consist solely of participatory interest in collective schemes or similar schemes which will invest in a diversified mix of global assets, including equities, bonds, fixed income, property, preference shares, money market instruments and listed and unlisted financial instruments as determined by legislation from time to time. The asset allocation will be actively managed with exposure to various asset classes, countries and regions being varied to reflect changing economic and market circumstances, to maximize returns for investors. The portfolio can invest across various jurisdictions and markets subject to the investment conditions determined by legislation from time to time. Where the aforementioned schemes are operated in territories other than in South Africa, participatory interests or any other form of participation in these schemes will be included in the portfolio only where the regulatory environment is to the satisfaction of the manager and trustee and is of a sufficient standard to provide investor protection at least equivalent to that in South Africa.

PMK Global Flexible Prescient Fund of Funds

Minimum Disclosure Document - Class A1

31 May 2021

	Specific Risk
Default Risk	The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality it vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
Derivatives Risk	The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.
Developing Market (excluding SA) Risk	Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
Foreign Investment Risk	Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
Interest Rate Risk	The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
Property Risk	Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
Currency Exchange Risk	Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
Geographic / Sector Risk	For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
Derivative counterparty Risk	A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.
Liquidity Risk	If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
Equity Investment Risk	Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

The dividend yield of each company is the dividends per share divided by the price.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. The Fund's asset allocation has been calculated based on the latest available Morningstar data for the underlying Fund holdings. Morningstar d

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. For any additional information such as fund prices, brochures and application forms please go to www.prescient.co.za.
