Project
under the UAHD

Information and Training Center for Humanitarian Demining

The goal of our project

The goal of our project is to create a modern training center.

The project "Information and Training Center for Humanitarian Demining" is a project planned to be implemented by the Ukrainian Association for Humanitarian Demining together with partners.

"Information and Training Center for Humanitarian Demining" is created as a training center for humanitarian deminers, for partners and members of the association who work and are related to mine action.

Why is this necessary?

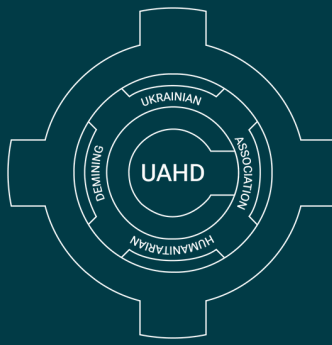

Mine action is a safety issue that concerns everyone. Ukraine has a lot of land contaminated with explosive objects and remnants of war, and our project is aimed at solving this problem.

Main tasks

- 1. Training and education of deminers.** Our center will provide demining sappers with the opportunity to train according to international standards. We'll create the conditions for the most realistic training possible.
- 2. Informing the public.** The center will provide an opportunity for the Association's partners to conduct activities to inform the public about the risks associated with explosive objects, seminars and trainings.
- 3. Testing an equipment.** Our center will be a platform for partners producing mine action equipment where they can present and test their products.

**Project
under the UAHD**

Structure of the center

Our center will consist of:

- **Training ground.** Here sappers will be able to train and test equipment. The training ground will provide a safe environment for training. There will be no explosion-related testing or handling of explosive objects at the training ground, so no permits or additional safety precautions are required
- **Conference hall.** A place to hold events to inform the public about the risks associated with explosive hazards, seminars by mine action instructors, presentation of equipment and machinery for humanitarian demining.
- **Warehouse.** To place and store necessary equipment and machinery.

Partnerships and financing

For the implementation of this project, we plan to attract funds from donor partners of the Ukrainian Association of Humanitarian Demining. Thanks to this partnership, we will be able to create a modern and efficient training center in Ukraine.

Conclusion

The project "Information and Training Center for Humanitarian Demining" not only enhances the security of our country, but also promotes the development of the field of humanitarian demining. We invite you to join our project and take a step together towards a safe Ukraine.
