

## TRANSIT PRIORITY FEATURES

The Bailey Avenue Bus Rapid Transit (BRT) project will include special transit priority features and new schedules to make buses faster and wait times shorter.

### QUEUE JUMP LANE

A **queue jump lane** lets buses move past congestion, or “the queue,” at an intersection.

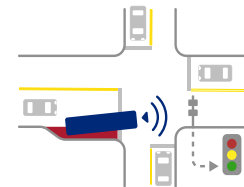

These can be paired with special **bus only signals** to let buses get a head start.

Queue Jump

### TRANSIT SIGNAL PRIORITY

**TSP or Transit Signal Priority**, lets buses move through intersections more quickly and keeps buses on time.

Transit Signal Priority

### BUS ONLY LANES

**Bus only lanes** keep travel lanes clear to help them stay on schedule.

Dedicated Bus Only Lanes  
(In Select Locations)

### MORE BUSES

BRT routes have **more buses** during the busiest parts of the day, allowing for **more frequent trips**.
