

METADefENDER

Managed File Transfer™

Modernize your business productivity, security & compliance

MetaDefender MFT improves business efficiency by automating file transfers and enabling secure crossnetwork collaboration. It leverages OPSWAT's industryleading Multiscanning and Deep CDR technologies for advanced threat prevention. With comprehensive visibility into file access and workflows, it ensures compliance.

Key Features

- 
Supervisory Approval Flow
 Ensure compliance with single or multi-stage approvals for file transfers.
- 
Shared Spaces
 Upload files and collaborate among group members within a shared workspace.
- 
Audit Logs & Reporting
 Track file lifecycles, system events, and job execution for compliance.
- 
Connectors
 Enable connectors to SharePoint Online, SFTP, or SMB folders.
- 
Restful API
 Customize integrations with productivity tools and automate secure file transfers.
- 
Outbreak Prevention
 Scan files periodically with Multiscanning for zero-day protection.
- 
Scheduled Workflows
 Automate file transfers across SFTP, SMB, SPO, and other MFTs at scheduled times.
- 
Ease of Deployment
 Enjoy seamless setup in minutes with a step-by-step installer.

METADefENDER

Managed File Transfer

Business Productivity

Logic-based and scheduled file transfers streamline operations and reduce manual effort. This eliminates delays, ensuring seamless and secure data sharing and collaboration across all channels.

Visibility & Control

Provides full visibility into file transfers, enabling admins to track movements, manage jobs, control access, create integrations, and generate detailed reports — all from a centralized platform.

Security

Secure file transfers utilizing end-to-end encryption, strong authentication, and OPSWAT's industry-leading advanced threat prevention.

Compliance

Offers oversight over file transfers with audit trails, access, and security controls.

MetaDefender MFT serves as the central piece for all file transfers within an organization. Deployed across various network segments, it facilitates file transfers to and from external sources, internal systems, and even OT or critical infrastructure environments. This underscores the need for a modern MFT solution in organizations of virtually any size and sector to enhance security.

MetaDefender MFT empowers organizations with industry-focused managed file transfer, enabling proactive defense and compliance across critical sectors.
