

A.I

And the world today

Well, everyone we are just about through with the Biblical Holidays for the fall, and the season of sukkot is about to end. But the message of sukkot is a future every believer can look forward to. One day the Messiah will dominate the whole world with his messianic Kingdom. And that's a Kingdom which will never end [**Dan.7:13-14**]

The A.I Generation

But as for the world at large we have noticed for a few years now that modern technology seems to be invading every part of our life, society, and culture. Yes, the new normal is A.I. and if you're not using it in one way or another you're doing it without even noticing it. A.I is in all cell phones, internet, PC's, Tv. Or any electronic devices you may own. You just can't seem to get away from its influence. It's rooting itself and is becoming a trend into common living and it's telling us and conditioning us that we just can't live without it.

What do the Scriptures say on A.I

When we look into what the scriptures have to say regarding technology... we are told by the prophet Daniel in [**Dan.12:4**] that in the future technology will fill and run the world. As it says; *"But you Daniel shut up the words and seal the book till the time of the end; many shall run to and fro, and knowledge shall increase"* This basically means that when man is closer to the coming time of the 7yr tribulation which leads to the end man's technology will advance in a way that the world has never known or experienced. At that time what secret was sealed in Daniel's prophecy will be revealed.

Technology and the future

While mans level of knowledge seems to be growing at an alarming rate it is nothing to fear but to realize where we all at according to bible prophecy. It means were getting closer and closer to the times of tribulation, but our hope as believers is that the resurrection of the Messiah will take place before this time fully develops or happens. Another thing to realize is that A.I for the moment can be used for evil or for good. There are some benefits for using it in different applications. Its not something we all should fear or be afraid of.

Decerning A.I

While A.I try's to sell us on the idea that we just cant live without it here are a few things to consider while using it.

1.AI can sound confident even when it is wrong.

Artificial intelligence can produce convincing answers, quotations, interpretations, or “facts” that are incomplete or inaccurate. Discernment means checking what AI says against reliable sources—and for biblical teaching, against Scripture itself.

2.AI does not replace spiritual wisdom.

AI can analyze language, history, and ideas, but it does not possess spiritual maturity, conviction, or the guidance of the Holy Spirit. Believers should use AI as a tool, not as the final authority for doctrine, morality, or spiritual direction.

3.AI can reflect bias, assumptions, and human error.

Because AI learns from human-created material, it can reproduce popular opinions, theological traditions, cultural assumptions, and mistakes. Discernment helps us ask: **Is this actually true, is it supported by evidence, and does it agree with the full context of Scripture?**

Bottom line

A.I should never be used to solve your biblical, moral, or spiritual problems. A.I is not the go to for everything, God is [**Psa.54:4& Isa.41:10**]. God is our constant help for all our needs and spiritual guidance in this life and in this world not A.I. While we may see a lot of great benefits with A.I remember it will one day be dominated by the Antichrist who will use it for his demonic purposes during the tribulation.

Our Encouragement

If you are struggling about what to think about A.I just know the following;

1. **Verify before you trust.**

Don't accept an AI answer simply because it sounds polished. Check important claims against Scripture, reliable sources, and the full context.

2. **Use AI as a servant, not an authority.**

Let AI help you research, organize, compare, and create—but do not let it replace prayer, wisdom, conscience, or spiritual discernment.

3. **Ask whether AI is helping you become more faithful.**

Use technology in ways that strengthen your understanding, integrity, ministry, and service to others rather than making you passive, dependent, or careless.

Overall **“Use AI wisely, test everything carefully, and keep God’s truth above the tool.”**

Wishing everyone blessings and fruitfulness in serving our Messiah
