

## DOI Assignment Policy of *Pollution and Diseases*

### *Pollution and Diseases* — International Scientific Journal

<https://pollution-diseases.org>

*Pollution and Diseases* assigns Digital Object Identifiers (DOIs) to all eligible scholarly outputs to ensure persistent identification, reliable citation, and long-term accessibility. DOI registration is performed in accordance with the standards and technical requirements of Crossref.

Each DOI identifies a distinct scholarly object and remains stable over time. DOIs are independent of publication date, volume, issue number, or website structure and are never reused, altered, or reassigned after registration.

To accommodate the journal's multidisciplinary scope and multiple publication formats, separate DOI namespaces and independent numbering sequences are maintained for different categories of content. This approach ensures clarity, scalability, and compatibility with indexing and metadata systems.

#### DOI Structure

All DOIs assigned by the journal follow a consistent logical structure composed of:

1. a journal identifier,
2. a content-type code,
3. a locally assigned sequential number.

Information such as publication year, issue, thematic collection, or editorial context is recorded exclusively in the metadata and is not embedded within the DOI itself.

#### DOI Codes by Publication Type

Publication type	DOI code	Numbering sequence	Example DOI
Journal article	art	Independent	10.xxxx/pd.art.0001
Repository material (including retrospective publications)	rep	Independent	10.xxxx/pd.rep.0001
Book / monograph	book	Independent	10.xxxx/pd.book.0001
Book chapter	ch	Independent (linked to book)	10.xxxx/pd.ch.0001.01
Annual volume / yearbook	year	Independent	10.xxxx/pd.year.0001
Supplement / special publication	sup	Independent	10.xxxx/pd.sup.0001

Each publication category maintains its own sequential numbering system. Numbering does not reflect chronological order, publication year, or thematic grouping and serves solely as a unique local identifier within the DOI namespace.

### **Assignment and Maintenance**

DOIs are assigned at the time of publication or, in the case of archival materials, upon their formal inclusion in the journal's repository. All associated metadata are curated and updated as necessary to ensure accuracy, interoperability, and long-term discoverability.

This policy applies to all contributors, editors, affiliated projects, and publishing initiatives associated with *Pollution and Diseases* and constitutes an integral component of the journal's editorial standards.
